

VigiScan Security Report

Alert	Risk	Path	Solution
Content Security Policy (CSP) Header Not Set	Medium	http://example.com/sitemap.xml	Ensure that your web server, application server, load balancer, etc. is configured to set the Content Security Policy header. Modern Web browsers support the Content-Security-Policy and X-Frame-Options HTTP headers. Ensure one of them is set on all web pages returned by your site/app. If you expect the page to be framed only by pages on your server (e.g. it's part of a FRAMESET) then you'll want to use SAMEORIGIN, otherwise if you never expect the page to be framed, you should use DENY. Alternatively, consider implementing Content Security Policy's "frame-ancestors" directive.
Missing Anti-clickjacking Header	Medium	http://example.com	
Content Security Policy (CSP) Header Not Set	Medium	http://example.com/robots.txt	Ensure that your web server, application server, load balancer, etc. is configured to set the Content Security Policy header.
Content Security Policy (CSP) Header Not Set	Medium	http://example.com

contain sensitive, personal or user-specific information. If it does, consider the use of the following HTTP response headers, to limit, or prevent the content being stored and retrieved from the cache by another user:

Cache-Control: no-cache, no-store, must-revalidate, private

Pragma: no-cache

Expires: 0

This configuration directs both HTTP 1.0 and HTTP 1.1 compliant caching servers to not store the response, and to not retrieve the response (without validation) from the cache, in response to a similar request.

X-Content-Type-Options	Header
Missing	

Low

<http://example.com>

Ensure that the application/web server sets the Content-Type header appropriately, and that it sets the X-Content-Type-Options header to 'nosniff' for all web pages.

If possible, ensure that the end user uses a standards-compliant and modern web browser that does not perform MIME-sniffing at all, or that can be directed by the web application/web server to not perform MIME-sniffing.
